

Tabletop Terrain

TOP-SECRET NEPTUNE BIGOT

Tabletop Terrain is a New Zealand company that designs and produces 15mm World War II terrain for use in **Flames of War**. Detailed here are our most popular pieces of terrain, and we have more pieces to compliment any mid to late war gaming table coming this year.

All pieces in these modular kits are carefully cast in Ultracal 30 which is a super-strength gypsum cement that won't chip or crumble. Resin parts are cast in a high quality two part rigid urethane resin. **This is quality terrain that is built to last years of gaming.**

NEW!

15mm Flames of War Trench Kits:

US\$17.50 for Kit A: 15mm Trench + Angle Combo.

This kit provides enough modular pieces to create: Twenty cms of two-sided trench with a central 45 degree bend, or forty cms of one-sided breastwork with two 45 degree bends (one concave and one convex) with additional pieces to build a free-standing gun emplacement.

Any length of 'zig zag' two sided trench with multiple copies of this kit.

US\$12.50 for Kit B: 15mm Straight Trench.

This kit provides enough modular pieces to create: Twenty cm of straight two-sided trench, or forty cm of straight one-sided breastwork.

US\$7.00 for Kit O: 15mm Forward OP.

15mm forward observation post kit 15mm forward observation post kit. This five part resin kit builds into a 15mm forward observation post that's designed to drop into our trenches (Kits A and B above). The finished OP is large enough to hold a Flames of War small Infantry observer base.

US\$14.50 for Kit T: 15mm Guard Tower.

This eight part resin kit builds into a 15mm guard tower with a removable roof. The finished tower is large enough to comfortably hold a Flames of War small Infantry base.

US\$9.00 for Kit D: 15mm Emplacements.

This kit provides enough modular pieces to create two large gun emplacements as shown in photo.

US\$13.95 for Kit F1: 15mm 1930's Building Facade.

This detailed, single piece building facade is cast in high strength Ultracal 30 plaster/cement blend. Measuring by 14.5cm tall x 9.5cm (or 5 7/10" x 3 7/10"), it is designed to represent the fronting on a 1930's style two story building, with a ground floor cafe or store front. Please click images above for larger versions.

It can be used to represent an intact building, and because it's cast in cement can be drilled, sanded and cracked to make a war torn ruin. Doors, windows and the floor level spacing have all been created with 15mm Flames of War based figures in consideration.
